

VirtuGuard™ Remote Monitoring for CHeKT Customers

With the recent development of an integration with Immix and CHeKT, VirtuGuard™ can easily offer remote video monitoring services for CHeKT customers.

About VirtuGuard™

VirtuGuard™ is a remote video monitoring service that protects commercial and residential properties across the U.S. From remote Command Centers, Agents monitor surveillance cameras and other security infrastructure to detect and respond to suspicious or illegal activity.

About Immix

VirtuGuard™ uses Immix as our Central Station monitoring software. Immix allows Agents to manage and respond to security events from different systems, all in one integration platform.

New Immix Integration with CHeKT

Immix recently announced a new integration combining their monitoring platform with the CHeKT video monitoring platform that integrates video analytics, live cameras, and remote monitoring centers. With the CHeKT Video Control Panel, all on-site cameras can be rapidly connected to VirtuGuard™ Command Centers. VirtuGuard™ can now easily offer monitoring for any CHeKT clients with this streamlined integration.

The Immix-CHeKT integration enhances threat detection and Agent response times, as all security events can be managed in one platform. For more information on VirtuGuard™ remote monitoring for CHeKT clients, speak to your sales representative or use the contact information below.
